ALLOPATHY vs AYURVEDA AND PEER -REVIEWED RESEARCH PAPERS

The Ayurveda market in India was valued at INR 300 billion in 2018, and is expected to reach INR 710.87 billion by 2024, expanding at a compound annual growth rate (CAGR) of ~16.06%, during the forecast period (2019-2024). There are thousands of Ayurveda manufacturers including mega players like - DABUR INDIA, PATANJALI AYURVEDA. BAIDYANATH, HAMDARD LABORATORIES, ZANDU AYURVEDA, HIMALAYA WELLNESS, VICCO LABORATORIES etc. It is very clear that Ayurveda can not be just rejected and ignored.

Peer- reviewed research papers have their own importance in the scientific and human knowledge world. They are very important for the recognition and acceptance of any research and its implementation in the society, specially when its effects could be seen or

targeted on a large section of the society. This is one valid reason why science has reached to such a developed position that it is being accepted across the Globe. Though its abstract reasoning tradition was diminished when Rome had overwhelmed the Greek civilization, because of its culture of publication. India had a rich tradition of developed brain in the pursuit of research and analysis, also it was written and supported by teaching and discourses from the very ancient time. Vedas and Upanishads are testimony to the facts. However it was all written in Sanskrit. Some how Indians were not able to translate and circulate its contents based on high power research, in other languages.

We had great brains working in different parts of the country, at far flung places, with no contact among them. Publication and Circulation became a culture globally. It gave recognition, acceptance and authority to implement in the society even crossing the national boundaries.

The present controversy between IMA (Indian Medical Association) And Ayurvedic Companies has given rise to a direct confrontation between Allopathic system and Ayurvedic system (an alternative medical system). Ayurvedic system lag behind in sharing, communication and distributing their knowledge to the society in effective ways. They do not

follow or develop Peer reviewed research paper publication as such always criticized by the scientific minds . Let there be a transparent research and analysis system followed by peer reviewed research papers publication and circulation across the and beyond nations.

Words from the Chief Editor

All participants deserve special thanks from me in the present scenario of COVID-19. Researchers, writers, reviewers, my editorial team and editorial board members deserve special thanks for keeping morale high of 4D International journals. Due to space constraints not all papers were selected for publication in the current issue. However we will provide more space in the coming issue of journal to give opportunity to more participants whose papers are selected after peer-reviewed.

Till then best of luck and stay safe.
